Top 5 Favorites React Project

Objective:
Build an application that displays your top 5 favorite items from a chosen category. Each item within the list should have a minimum of four properties. For instance, if you choose movies as your category, each movie could have properties like title, director, genre, and release year.

Step 1: Project Initialization

1. Navigate to your desired project directory.
2. Run the following command: `npm create vite@latest`
3. Select "react" and then "javascript".
4. Install dependencies using `npm install`.
5. Start the development server with `npm run dev`.

Step 2: Header Component

1. Create an `<h1>` tag with the content "My Top 5 Favorite _____".
2. Apply custom styling to the `<h1>` tag using a CSS class.

Step 3: Body Component

1. Utilize `useState` and `useEffect` within the Body component to manage and store a JSON list of items.

Step 4: ItemCard Components

1. Initialize `ItemCard` components inside the Body component.
2. Pass each item's details to the `ItemCard` components as props.
